Crypto enthusiasts, despite the uncertain market conditions, are counting down the days before the ETF deadline, with some even predicting that Bitcoin's value may soar to \$100,000.

We can confirm that the account @SECGov was compromised and we have completed a preliminary investigation. Based on our investigation, the compromise was not due to any breach of X's systems, but rather due to an unidentified individual obtaining control over a phone number associated with the @SECGov account through a third party. We can also confirm that the account did not have two-factor authentication enabled at the time the account was compromised. We encourage all users to enable this extra layer of security. After the incident, the SEC made amends by acknowledging that their Twitter account had been compromised since two-factor authentication was not in place. Speculation of potential market manipulation or internal faults arose as a result of this episode.

Misinformation and its eventual correction show how the market reacts to rumors and news about regulations.

Increasing Confidence in Bitcoin Despite Institutional Focus

According to Fundstrat Global Advisor Tom Lee, Bitcoin might reach \$150,000 in the coming year and \$500,000 in the next five years—particularly if Bitcoin spot ETFs are approved.

The data from Glassnode also shows that institutional investors are showing a lot of interest, with 36% of the market being Bitcoin futures on the CME Exchange.

This change shows that institutional investors are becoming more comfortable with Bitcoin derivatives, which could mean that the market is stabilizing and maturing.

It is becoming more clear that institutional investors are having an effect on trading patterns in the cryptocurrency market, which could lead to wider adoption of cryptocurrencies.

Bitcoin may have a better future because to Tom Lee's optimistic forecasts and the increasing institutional interest shown by Glassnode. This might boost investor confidence, which in turn could cause demand to increase and prices to rise, both in the near and distant future.

Bitcoin Price Prediction

Bitcoin is exhibiting a consolidation pattern as it hovers around \$45,990 as of January 10, during the US trading day. At \$45,721, the cryptocurrency will find its daily pivot point. At \$46,306, Bitcoin is facing its first resistance level; at \$47,228 and \$47,922, it may find other difficulties that slow its ascent.

In the event of a decline, \$45,230 has been identified as a support level, with further safeguards at \$44,739 and \$44,398. To prevent additional price declines, these levels are vital.

At its present level of 57 on the Relative Strength Index (RSI), Bitcoin’s mood is fairly bullish, but it is not yet overbought, which usually indicates a possible price retreat.

The price of Bitcoin is currently above its 50-Day Exponential Moving Average (EMA), which is \$44,708.0, suggesting that there is a short-term positive trend.

Bitcoin most recently completed a Fibonacci retracement around \$45,721, which coincides with the 38.2% Fibonacci level, according to the technical chart analysis.

A sustained decline below this level might heighten selling forces, particularly as Bitcoin recovers from overbought conditions, making this retracement an important indicator.

If Bitcoin maintains a price over \$45,250, the current trend will likely continue, which is a cautiously optimistic outlook. Bitcoin, according to short-term predictions, may try to break through its immediate resistance levels soon.
