What is KiloEx?

KiloEx

KiloEx is a decentralized exchange (DEX) specializing in perpetual futures trading, built on blockchain networks such as BNB Chain, opBNB, and Manta. Designed to merge the speed and user experience of centralized exchanges (CEX) with the transparency and security of decentralized finance (DeFi), KiloEx delivers a high-performance trading environment for both retail and institutional users.

One of the main features of KiloEx is One-Click Trading (1CT), achieving faster order execution through a pre-funded gas fee system. Users can withdraw funds anytime and securely access their 1CT wallet across multiple devices with a single PIN.

KiloEx io is built around its peer-to-pool perpetual trading model, allowing users to trade perpetual contracts directly with one another without relying on traditional order books or central intermediaries. This direct matching of traders reduces slippage and enhances trading efficiency, delivering a smooth experience for both retail and institutional users.

This is mainly achieved by introducing the KiloEx Vaults. They enable users to earn passive income by providing liquidity with \$USDT, \$USDC, or other mixed assets, sharing 30% of the platform's revenue. The upgraded Hybrid Vaults enhance flexibility by supporting multiple asset types, each with an adjustable Loan-to-Value (LTV) ratio to manage risk efficiently.
