Lucky Block (LBLOCK) Price Prediction 2024,2025,2030 – Is LBLOCK a Good Investment?

Following the success of Lucky Block's presale, an even more spectacular initial coin offering (ICO) took place. The Lucky Block (LBLOCK) coin saw an over 50x price increase to about one cent, indicating the tremendous demand for it. There are currently V1 and V2 tokens for LBLOCK, and market participants are projecting both coins' future trajectory. LBLOCK has given early investors enormous gains.

We examined the foundations of the project and offered a prospective Lucky Block pricing forecast for the years 2024–2030. Our study examines the elements that could bring investors even higher profits by delving deeply into Lucky Block's roadmap. We also go over how to purchase LBLOCK V2 in detail to make investing in Lucky Block easier.

[TRADE_PLUGIN]BTCUSDT,ETHUSDT[/TRADE_PLUGIN]

What is Lucky Block Crypto?

Using blockchain protocols and built on the Binance Smart Chain, Lucky Block bills itself as a global crypto lottery coin. Scott Ryder serves as CEO of the LBLOCK initiative, which operates in the [cryptocurrency](#) markets. The team behind this initiative claims their goal is to make internet gaming more open and equitable. The proliferation of the internet and mobile devices has facilitated the

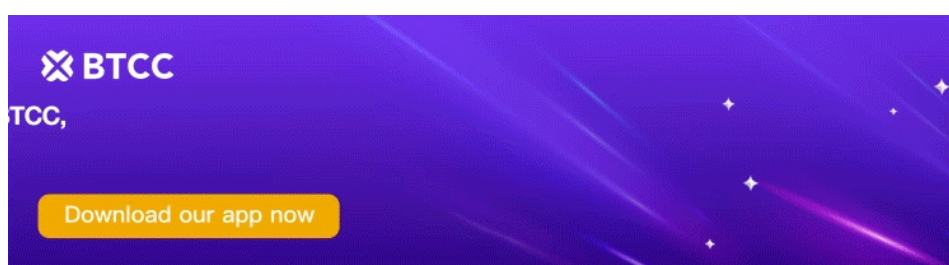

spread of online gambling.

The team's goal is to design a lottery mechanism for Lucky Block that improves players' possibilities of winning while also giving token holders with a solid plan for making contributions to the Lucky Block ecosystem. As the crypto lottery project gains traction, it will be able to offer an alternative to traditional lottery systems and increase overall transparency.

The slogan "Everyone's a winner" is Lucky Block's (LBLOCK) defining characteristic. Since there is only ever one winner in a lottery, this seems counterintuitive at first. The fact that LBLOCK token holders automatically receive dividends of every jackpot according to the holding amount of the user makes it so that everyone wins, regardless of whether or not they actually play the lottery.

Token holders can profit from simply keeping the tokens, as 10% of each prize is redistributed to them. However, the website makes it clear that linking a user's wallet with the Lucky Block lottery app is required for this to occur.

Lucky Block (LBLOCK) Price History

This is a brief overview of LBLOCK's pricing history:

Key Points:

- The Lucky Block presale began in Q42021, and it sold out in 49 of the 90 days that were allotted.
- On January 26, 2022, PancakeSwap listed LBLOCK V1, sparking a further bull run. By mid-February of last year, investors who purchased Lucky Block at the initial coin offering had made over 1,100% profit.
- On February 17 of last year, Lucky Block surpassed its ATH of \$0.0095, giving presale investors a return of more than 3,000%.
- At the moment, the price of LBLOCK V2 is \$0.00052, and it can be found on LBank, MEXC, Uniswap, and Gate.io.

From the very start, Lucky Block demonstrated that it would be an accomplished undertaking. Lucky Block had a wildly successful cryptocurrency presale prior to listing on an exchange. An opportunity to gain a competitive advantage was presented to investors through early-round fundraising. The Lucky Block presale sold out in record time due to the high demand for the LBLOCK coin. It was planned that the Lucky Block presale, which began in Q42021, would continue for 90 days. Those who invested early had access to little more than 32 billion tokens. Within 49 days, the LBLOCK token presale was sold out due to the enormous demand.

In light of the current crypto bear market, the fact that Lucky Block's presale sold out is all the more remarkable. The fact that Lucky Block has evolved into a powerful NFT contests platform in addition to a jackpot prize-draw project is another major selling point for the investment. With the addition of

NFT giveaways, Lucky Block's decentralised prize draws continue as before, but with more security and transparency than conventional platforms.

People are wary of participating in traditional drawings because of the tedious and inefficient method of collecting prizes. Thanks to blockchain technology, Lucky Block streamlined the procedure, allowing for daily draws and fast payouts. By taking part in Lucky Block draws, players are helping out worthy causes; after all, 70% of the money goes to the winners and 10% goes to charity. Marketing, token holders, and the NFT pool split the remaining 20%.

The Lucky Block V1 decentralised exchange went live on January 26, 2022, following the presale. The first bull cycle for Lucky Block occurred when the high demand from the presale extended to the ICO.

LBLOCK price chart

In the first month of trade, the price of LBLOCK increased by almost 1,000%. Following LBank's listing on 11 February of last year, further exchange listings occurred, leading to an even greater increase. Investors saw profits of over 1,100% in the first two weeks following the Lucky Block ICO, thanks to the full bull run.

During the private sale, when the price of an LBLOCK was \$0.00015, investors who purchased the coin at the beginning of the presale stage made even more money. LBLOCK corrected after reaching an ATH of \$0.0095 on 17 February 2022. Nearly \$0.000234 is the current price of Lucky Block V1 as of this writing.

Lucky Block (LBLOCK) Price Technical Analysis

All financial markets use moving averages (MA), a well-liked indicator that smoothes price movement over a predetermined period of time. Since they are a trailing indication, past price activity has an impact on them. The simple moving average (SMA) and exponential moving average (EMA) are the two forms of moving averages shown in the table below.

Daily Simple Moving Average (SMA) & Daily Exponential Moving Average (EMA)

Date Calculated:2023-12-14

3_SMA	\$ 0.000059790600	3_EMA	\$ 0.000061897400
5_SMA	\$ 0.000069301800	5_EMA	\$ 0.000062844600
10_SMA	\$ 0.000059763600	10_EMA	\$ 0.000061247400

Lucky Block (LBLOCK) Price Prediction 2024

In 2024, we expect LBLOCK prices to continue to rise due to a number of causes. Among these is the fluctuation in Bitcoin's value. It is clear that the altcoin market mimics Bitcoin's behaviour. In the near term, Bitcoin may be in a bear market, but many investors think it will eventually hit a new all-time high.

Bitcoin, in the long term, is likely to continue its upward trend. Regardless of whether Bitcoin is in a bear market or not, the price behaviour after falling from its all-time high (ATH) is reminiscent of the bear market in 2018 (seen above), and there hasn't been a substantial short-term rally. Following its 2018 all-time high, Bitcoin saw a precipitous decline before recovering to the 0.702 Fibonacci retracement level. Afterwards, its bear market began again. As anticipated, Bitcoin has not seen a short-term rally to the 0.702 Fib since it dropped from its ATH of \$69,000.

The altcoin market would be swept away by a Bitcoin rally to \$53,000 if it were to reach that price target. Thus, by the year's end of 2024, LBLOCK will most certainly face its next level of resistance, which is \$20.05. For Lucky Block, the LBLOCK token burn is another important step towards increasing demand and appealing to investors.

In September of last year, Lucky Block CEO Scott Ryder made the announcement about a monthly token burn. Increasing the coin's value is the goal. Since investors place a high value on limited assets, the announcement of token burns has caused the value of many cryptocurrencies, including Terra LUNA and LUNC, to skyrocket. Lucky Block's price increased by 60% in three days following the announcement of the token burn.

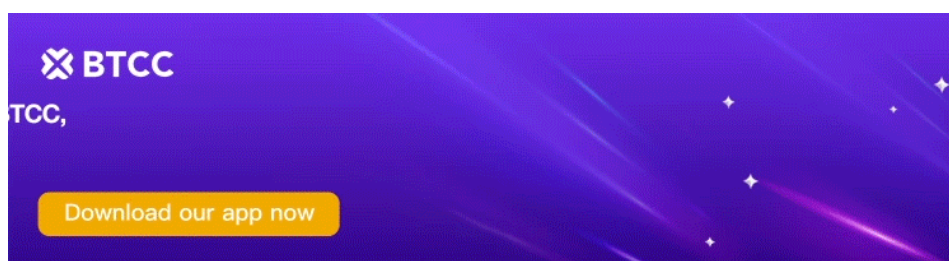

[TRADE_PLUGIN]BTCUSDT,ETHUSDT[/TRADE_PLUGIN]

Lucky Block (LBLOCK) Price Prediction 2025

Given its current low price point, Lucky Block is an undervalued cryptocurrency that could be a great investment before it experiences another bull run. In 2024, LBLOCK will aim for the \$0.0095 ATH if it manages to break through the \$0.005 resistance level. There has been a Bitcoin bull run in 2021, but no major altcoin bull run as of yet. If the alt-coin season that typically follows Bitcoin's bull run materialises, Lucky Block might be the next big thing in the cryptocurrency market.

Lucky Block's price can surge 57% from its current all-time high to \$0.015 if the altcoin market has a bull run. Since a severe crypto winter market is anticipated to be in full swing in 2025, that may occur prior to that year. A correction or drop in the cryptocurrency market is inevitable after an upswing. As Lucky Block slides back, it may break through some of its critical supports, as many investors anticipate a nasty crypto bear market. In 2025, we expect the LBLOCK price to retest the \$0.003 - \$0.004 range, where it will likely find solid support.

Lucky Block (LBLOCK) Price Prediction 2030

Although there are a lot of cryptocurrencies that potentially generate short-term profits, the only ones that really shine in the long run are utility tokens. Lucky Block is an example of a platform that provides opportunities to earn cryptocurrency through giveaways. You can buy Platinum NFTs and get rewards every day with \$LBLOCK. As a result, continuing to hold onto tokens for the long haul can be encouraged by the consistent passive revenue. In addition, the platform hosts token burning

events, which contribute to the eventual reduction of the token supply.

The token price has the ability to rise in response to increased demand as the supply decreases. Because of all these reasons, we think Lucky Block is a great investment for the future. It is possible that \$LBLOCK will reach \$1 before the end of this decade. By the end of 203, the lowest price for \$LBLOCK might be close to \$0.5.

[TRADE_PLUGIN]BTCUSDT,ETHUSDT[/TRADE_PLUGIN]

Potential Highs and Lows of LBLOCK

Is Lucky Block (LBLOCK) a Good Investment?

Lucky Block's practicality provides the solution to the query. Whether or not this platform addresses actual issues is an important question for investors to ask. I would say yes. As an obvious application case, Lucky Block has decentralised, simplified, and made safer the process of entering competitions and receiving prizes.

Due to its hosting on the blockchain, which eliminates the possibility of interference from external parties, its competition platform is secure and open. Huge prizes are up for grabs in Lucky Block's contests. The public team's relentless pursuit of LBLOCK network and token value enhancement is another positive catalyst for Lucky Block. Unlike other crypto projects, the founding team is not anonymous; they self-dox and make frequent appearances on AMA events and similar Q&A sessions with LBLOCK holders.

After creating a BEP-20 token, Lucky Block moved on to an ERC-20 token, also known as the V2

token. The latter is great for day trading due to the lack of a sales tax. More CEX listings for the V2 coin have increased visibility and demand. There will be 1% token burns per month and further exchange listings on the way. More listings will bring more eyes to Lucky Block, but the token burn will reduce availability.

An already-rare asset with a low market valuation (around \$15 million) and a low price point is in the ideal position to benefit from rising demand and falling supply. Another low-cap cryptocurrency jewel with significant upside potential this year is Tamadoge, which readers may find interesting in our price prediction.

[TRADE_PLUGIN]BTCUSDT,ETHUSDT[/TRADE_PLUGIN]

Conclusion

Major prizes, such as a Lamborghini and a mansion worth \$1 million, have been offered by Lucky Block's platform to encourage members to participate in drawings. Since LBLOCK is a requirement for participation in Lucky Block's NFT tournaments, its growth has been good news for investors in the cryptocurrency. All the way from the presale to the ICOs, LBLOCK has given its investors a huge return on their investment. Participants in the competition and investors alike gain from the network's ongoing stream of new advancements. Investors shouldn't miss out on this initiative since Lucky Block's improved usability should lead to a surge in coin demand.

FAQs

What may the cost of LBLOCK be in 2025?

According to our Lucky Block prediction, the coin will rise and surpass its existing all-time high (ATH) of \$0.0095 by setting a new ATH. LBLOCK might rise to \$0.015 or \$0.02 in the upcoming crypto winter before retracing to \$0.003.

At what initial price did Lucky Block trade?

Investors could purchase Lucky Block for \$0.00015 during the presale. The price increased to \$0.00019 during the second presale session. Following its listing on significant exchanges, investors were able to purchase Lucky Block for \$0.0008.

When did Lucky Block reach its peak?

Lucky Block surged more than 1,100% after its initial coin offering (ICO) and hit its peak price of \$0.0095 in mid-February of last year. A few days after the coin was listed on exchanges, the bull run began.

How can I put money into Lucky Block?

Lucky Block is available for purchase on both decentralised and centralised exchanges. A few of the exchanges that list LBLOCK are Uniswap, PancakeSwap, LBank, MEXC, and Gate.io. In the foreseeable future, further exchange listings are anticipated.

Where to Trade Crypto Futures?

You can trade crypto futures on BTCC Now. Over 300 USDT-margined perpetual trading pairs are available for users to trade, including many popular altcoins and meme-coins.

About BTCC

BTCC is a leading cryptocurrency trading platform that is distinguished by its ability to balance the simplicity of use with advanced features. It provides a comprehensive educational program through the BTCC Academy, 24/7 customer support, and robust security to both novices and experts. BTCC is a top choice for digital asset investors due to its emphasis on user contentment, which fosters a secure and informed trading environment across a variety of cryptocurrencies.

BTCC is one of the few exchanges in the market that offers high-leverage options for investors and concentrates extensively on futures trading. Users have access to more than 300 USDT-margined perpetual trading pairs, which encompass numerous prominent altcoins and meme-coins. Additionally, the platform has recently implemented spot trading to facilitate novice users who may not be acquainted with futures trading.

- **Established Reputation:** BTCC is one of the oldest and most well-known cryptocurrency exchanges, having been operational since 2011. Its history in the market enhances its credibility and trustworthiness.
- **A Diverse Selection of Cryptocurrencies:** BTCC allows customers to access and exchange a wide range of digital assets.
- **Margin and Futures Trading:** BTCC provides margin and futures trading options, allowing customers to expand their trading holdings and potentially increase their profits.
- **Proficient Trading Instruments:** such as real-time market data, trading charts, and technical analysis indicators. These tools can help users make informed trading decisions.
- **Security Measures:** BTCC values security and uses a variety of safeguards to secure customer payments and information. This includes two-factor authentication (2FA) and cold storage of cryptocurrency assets.
