Binance Lists Particle Network (PARTI) on HODLer Airdrops

On March 24, Binance, one of the world's leading cryptocurrency exchanges, has unveiled that Particle Network (PARTI) will be the 13th project featured in its HODLer Airdrops program. Users who were subscribed to BNB Simple Earn or On-Chain Yields between March 7 and 11, 2025, will receive a portion of the airdrop once the TGE concludes. Initial trading starts on Binance Alpha at 11:10 UTC on March 25. The TGE will set the maximum supply at 1 billion PARTI tokens, with 3% allocated to HODLer Airdrop participants.

Besides, Binance officially launches spot trading for PARTI at 13:00 UTC on March 25, offering trading pairs with USDT, USDC, BNB, FDUSD, and TRY. At launch, approximately 233 million tokens or 23.3% of the total supply would be made available for trading on the platform. After that, the token will no longer be available on Binance Alpha.

An additional 3% of the supply is reserved for upcoming marketing campaigns, expected to begin six months post-listing. Details on those campaigns have not yet been disclosed.

What is Particle Network?

Founded in April 2022, Particle Network is a modular Layer-1 blockchain designed to solve the fragmentation of users, liquidity, and interactions across multiple blockchains in the Web3 ecosystem. By introducing the concept of “chain abstraction,” it aims to streamline the user experience and enhance interoperability between networks.

At the heart of Particle Network is its Universal Accounts system, which allows users to manage a single address and balance across multiple supported blockchains. This eliminates the complexity of handling separate wallets and gas tokens for each chain, significantly improving accessibility.

As a Web3 infrastructure project designed to simplify the user experience and onboarding process for decentralized applications, Particle Network leverages modular account abstraction, wallet-as-a-service, and unified access protocols to make interacting with Web3 more accessible for both developers and everyday users.

With Particle Network, users can create wallets using familiar Web2 login methods like Google, Apple, or email, removing the need for seed phrases or browser extensions. Since its launch, the network has facilitated the creation of over 17 million wallets and processed more than 10 million user transactions.

Notably, Particle Network has attracted strong backing from leading venture capital firms. It previously secured \$7 million in seed funding from investors such as HashKey Capital, Animoca Brands, and GSR Ventures, further solidifying its position in the Web3 landscape.

The PARTI token is the native utility and governance token of Particle Network, playing a crucial role in powering the ecosystem. It is used for core network services such as wallet creation, authentication, and gasless transactions, while also enabling staking, rewards, and decentralized governance. \$PARTI has three main functionalities:

- **Staking & Governance.** \$PARTI holders can participate in ecosystem voting within Particle Network, contributing to and determining the direction of network development. This also achieves native decentralization at a governance level.
- **Universal Gas Token.** \$PARTI serves as Particle Network's native gas token and base gas token used by Universal Accounts. All gas fees paid by users on any chain are ultimately settled on \$PARTI.
- **Universal Liquidity Token.** \$PARTI also serves as a settlement and intermediate token for Liquidity Providers (LPs) within Particle Network, participating in cross-chain atomic swaps and earning swap fees.

PARTI Tokenomics

The PARTI token has a maximum supply of 1 billion tokens. Here's how it breaks down based on available reports:

- **Airdrop Allocation:** At least 3% (30 million tokens) will fuel Binance's HODLer Airdrops program.
- **Trading Availability:** No less than 23.3% (233 million tokens) will be listed for trading on Binance.
- **Marketing Reserve:** Over 3% (30 million+ tokens) is earmarked for campaigns planned six months post-listing.

This structure reflects a focus on community rewards and liquidity, key factors for early adoption and price stability.

Conclusion

The public testnet launch in May 2024 successfully demonstrated the capabilities of Universal Accounts and Universal Gas, marking a significant milestone for Particle Network. The PARTI token has performed strongly since its listing on Binance, and as the core of the Particle Network ecosystem, PARTI is critical in driving cross-chain interoperability and universal Gas payments. With the launch of Particle Chain, PARTI expects to further enhance its usefulness and attract more users and developers.

In the short term, the market sentiment is neutral and the price fluctuates greatly, but in the long run, with the expansion of Web3 ecology, PARTI is expected to usher in a broader space for development. Looking ahead, the project plans to integrate Universal Liquidity and Modular Nodes, with the mainnet launch set for Q3 2024 and additional features rolling out in 2025.

Competing with projects like NEAR, Avocado by Instadapp, and XION, Particle Network stands out with its comprehensive approach to chain abstraction and innovative dual staking system. These advancements position it as a strong contender in the evolving chain abstraction landscape.
