Pi Coin Price Prediction for 2025-Can Pi Price Hit \$10?

In the middle of 2025, the native token of Pi Network, Pi Coin, has been igniting discussions throughout the cryptocurrency community. Investors are wondering if it can make a resurgence and reach \$1 by the end of 2025 after it temporarily surged to almost \$1.70 in May and then settled back at \$0.60.

Let's examine the most recent developments, price-influencing variables, and what would have to occur for Pi to surpass the \$1 threshold.

The year 2025 was pivotal for Pi Network. The "Open Network" phase, which Pi has entered after years of development, enables third-party applications and services to communicate with the Pi blockchain. Even though the complete launch of the mainnet is still in the future, this was a significant step toward practical use.

Before completely launching the mainnet, the Pi Core Team aimed to have 100 decentralized apps (dApps) running on the network. Developers are rushing to fulfill the target of 80-85 active apps by June 2025. More than 10 million users have gone through the Know Your Customer (KYC) process earlier this year. It is important to Pi's identity-verified ecosystem.

At international gatherings, the project has also generated buzz. Rumors began circulating during May's Consensus 2025 that Pi Network was in talks with tech behemoths including Coinbase, Google, and Visa. In addition, it has launched a \$100 million Ventures Fund to back decentralized app development and is actively promoting PiFest, an international initiative that allows physical stores to accept Pi as payment.

Price expectations have been put under strain due to user discontent and delays in the mainnet rollout, notwithstanding all that.

Pi Coin Price Prediction 2025

In light of this, what are the odds that Pi Coin will finally hit \$1 by the year's end in 2025? Pi is now trading at approximately \$0.60, thus a 60% surge would be required to reach that mark. Although it is not completely out of the question, getting to \$1 would require a series of fortunate events to come together.

An increase in real-world usage through decentralized applications (dApps) and merchant adoption, a boost in market confidence, an easy way to access migrated tokens, and a successful launch of the completely open mainnet would all be important catalysts. Pi would also get the boost it needs if the crypto industry as a whole maintained its upward trend, with Bitcoin maintaining or even surpassing \$100,000. Additional fuel price volatility could result from any high-impact announcements, strategic collaborations, or integrations of key platforms.

Having said that, the majority of forecasts are still being cautious. Some optimistic predictions have Pi reaching \$1.50-\$2.00 by year's end, while more pessimistic projections have it staying put between \$0.40 and \$0.80. It will be ambitious to break \$1 unless Pi delivers on numerous fronts at the same time. Pi Coin may still shock, nevertheless, with its expanding ecosystem, large user base, and rising profile.

Why the Pi Price Is Still Declining

Pi Coin's price is still below expectations in spite of its expanding user base and well-known appearances.

The mainnet has not yet been fully opened.

There have been several delays in the "open mainnet" debut, which would permit unrestricted Pi transactions across wallets and dApps. The network is partially blocked until more apps launch and migration goals are reached, even though the infrastructure is mostly in place. This restricts wider utility and maintains institutional interest.

Diluting Price of Token Unlocks

Only roughly 7.4 billion of Pi's 100 billion tokens are in circulation at the moment. Due to rising supply, there is downward pressure on prices when big unlock events continue throughout Q2 and Q3 of 2025. For the market to accept these additional tokens and sustain price increase, there must be more demand.

Limited Use in the Real World

Real-world spending is still mostly concentrated within the ecosystem itself, despite Pi Network's advancements, which include international merchant events like PiFest. There won't be much organic price momentum or wider acceptance until Pi is widely used as a medium of transaction outside of its community.

Will Pi Coin Ever be Able to Compete with Bitcoin?

Being the first digital asset and still the most popular cryptocurrency today, Bitcoin has been at the head of the crypto market for quite some time. There is a vast worldwide infrastructure behind it, including institutional investors, national governments, major payment platforms, and retail merchants, and it trades for about \$105,000 as of mid-2025. As a safe, decentralized store of value and digital gold, its utility is obvious.

On the other hand, Pi Coin has only just begun its journey. With a market valuation of about \$4.6 billion and a price of \$0.60, Pi still has a ways to go before it becomes widely used, liquid, and recognized. What really sets Pi apart, though, is its mission to create an inclusive, scalable, user-friendly, mobile-first cryptocurrency environment. Pi could be positioned for more regulated or commerce-focused environments due to its mobile mining approach and emphasis on KYC compliance, which distinguish it from Bitcoin's open, anonymous paradigm.

Pi isn't trying to "replace" Bitcoin, but it might play a unique role in the future of cryptocurrency. Pi has the potential to become more of an ally than an adversary if it is able to successfully roll out its open mainnet, cultivate a thriving decentralized application environment, and propel widespread practical use, particularly in areas neglected by conventional banking. Pi isn't aiming to become Bitcoin in that regard. Its sole purpose is to attempt to become the first Pi, which could be sufficient.

Can Pi Price Hit \$10?

The price of Pi Network has dropped below \$1, but many in the community are holding out hope that it could go up to \$10 in the future. More than 70 million users, also known as Pioneers, have signed up for Pi Network. For a cryptocurrency, this is a substantial amount. The token's value might climb in response to increased demand if even a fraction of this group begins utilizing Pi for everyday purchases, online payments, or Pi ecosystem services.

The majority of the Pi tokens that have been mined are currently either locked or awaiting migration. Because of this, there aren't many tokens that may be traded freely. Assuming demand keeps growing due to the introduction of new apps or strategic alliances, the price may rise gradually.

A price of \$10 would be necessary for Pi to be considered realistic within the Pi Ecosystem, according to analyst Dr. Altcoin.

Conclusion

Pi Coin aims to revolutionize the integration of blockchain technology into everyday life by utilizing a mobile-first, identity-verified paradigm. It is one of the most distinctive and talked-about crypto projects currently underway. With the introduction of its Open Network phase, more developer engagement, and continuing community initiatives like PiFest, it has made significant progress in 2025. Though there are still obstacles, these steps show that we are making headway. While some have anticipated faster adoption outside of the Pi community, many users currently have restricted access to moved tokens.

The year 2025 marks a turning point for the project's millions of long-term supporters, the Pioneers. The project's capacity to provide a completely open mainnet, increase real-world use, and preserve community trust will determine whether hopes of seeing Pi Coin hit \$1 by year-end are still alive. Regardless of whether Pi takes that giant leap or keeps growing slowly, its story is still one of the most watched in the cryptocurrency world. It will be clear in the next months whether Pi can deliver on its early promises, both in terms of price and purpose.

FAQs

1. How does one mine Pi Coin and what is Pi Network?

Users may mine Pi coins on their cellphones with Pi Network, a mobile-first cryptocurrency initiative, without consuming a lot of energy or exhausting their battery. Users earn Pi through daily app logins and the development of a security circle with reliable contacts, as opposed to traditional mining.

2. Is Pi Coin secure and authentic?

Indeed, a group of Stanford PhDs created the actual digital asset known as Pi Coin. The application is readily accessible on the main app stores and doesn't cost anything to use. Like all cryptocurrencies, though, its future worth is uncertain.

3. Where do I purchase or trade Pi?

At the moment, Pi Coin may be traded on centralized exchanges like Bitget. To trade, users need to move their tokens to the mainnet and finish KYC.

4. How much Pi is in circulation and how much is in overall supply?

The greatest number of coins that Pi can have is 100 billion. Approximately 7.39 billion Pi coins were in use as of June 2025.

5. In 2030, how much will Pi Coin be worth?

The value of Pi Coin is predicted to range from \$1 to \$500 by 2030, contingent on exchange listings, ecosystem expansion, and adoption. While ambitious expectations reach \$200 or more, conservative forecasts point to \$1 to \$5. Market conditions and practical usability will determine the final result.

How to Trade Crypto on BTCC?

This brief instruction will assist you in registering for and trading on the BTCC exchange.

Step 1: Register an account

The first step is to hit the "Sign Up" button on the BTCC website or app. Your email address and a strong password are all you need. After completing that, look for a verification email in your inbox. To activate your account, click the link in the email.

Step 2: Finish the KYC

The Know Your Customer (KYC) procedure is the next step after your account is operational. The main goal of this stage is to maintain compliance and security. You must upload identification, such as a passport or driver's license. You'll receive a confirmation email as soon as your documents are validated, so don't worry—it's a quick process.

Step 3. Deposit Funds

After that, adding money to your account is simple. BTCC provides a range of payment options, such as credit cards and bank transfers. To get your money into your trading account, simply choose what works best for you, enter the amount, and then follow the instructions.

- **Fiat Deposit.** Buy USDT using Visa/Mastercard (KYC required).
- **Crypto Deposit.** Transfer crypto from another platform or wallet.

Fund Your Account

I don't have crypto assets

Fiat Deposit

Fund your account with USDT using
Visa/Mastercard

P2P

Buy and sell cryptos with flexible payment
methods and 0 transaction fees.

I have crypto assets

Crypto Deposit

Get the deposit address for BTC,ETH,or any
other crypto and deposit via the blockchain.

Step 4. Start Trading

If you wish to follow profitable traders, you might go for copy trading, futures, or spot trading. After choosing your order type and the cryptocurrency you wish to trade, press the buy or sell button. Managing your portfolio and keeping track of your trades is made simple by the user-friendly interface.

BTCC FAQs

Is BTCC safe?

Based on its track record since 2011, BTCC has established itself as a secure cryptocurrency exchange. There have been no reports of fraudulent activity involving user accounts or the platform's infrastructure. By enforcing mandatory know-your-customer (KYC) and anti-money laundering (AML) procedures, the cryptocurrency trading platform gives consumers greater security. For operations like withdrawals, it also provides extra security features like two-factor authentication (2FA).

Is KYC Necessary for BTCC?

Indeed. Before using BTCC goods, users must finish the Know Your Customer (KYC) process. A facial recognition scan and legitimate identification documents must be submitted for this process. Usually, it is finished in a few minutes. This procedure has the benefit of strengthening the security of the exchange and satisfying legal requirements.

Because their accounts will have a lower daily withdrawal limit, those who do not finish their KYC are unable to make deposits. It should be noted that those who present a legitimate ID without a facial recognition scan will likewise have restricted withdrawal options.

Is There a Mobile App for BTCC?

Indeed. For users of iOS and Android, BTCC has a mobile app. The exchange's website offers the mobile app for download. Since both the web version and the mobile app have the same features and capabilities, they are comparable.

Will I Have to Pay BTCC Trading Fees?

Indeed. BTCC levies a fee for trade, just like a lot of other centralised exchanges. Each user's VIP level, which is unlocked according to their available money, determines the different costs. The BTCC website provides information on the charge rates.

Can I Access BTCC From the U.S?

You can, indeed. According to its website, BTCC has obtained a crypto license from the US Financial Crimes Enforcement Network (FinCEN), which enables the cryptocurrency exchange to provide its services to investors who are headquartered in the US.

According to BTCC's User Agreement document, its goods are not allowed to be used in nations and organisations that have been sanctioned by the United States or other nations where it has a licence.
