The Top 10 Cryptocurrencies With Bullish Rebound Before the End of the Year

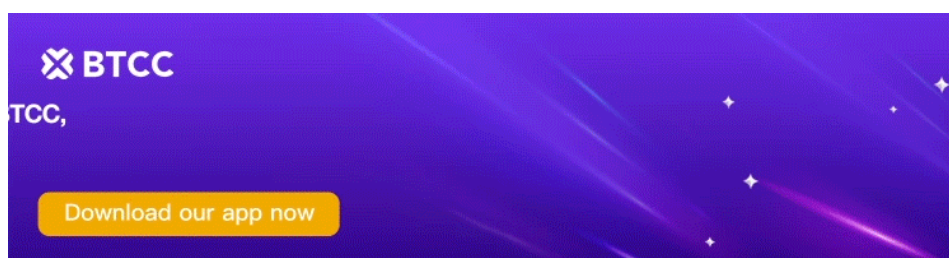

Top cryptocurrencies are attracting investors who want to diversify their portfolios.

2021 is one of the best years for cryptocurrency. Millions of cryptocurrencies are transferred every day for daily payments. Hype driven cryptocurrencies such as Shiba Inu and Dogecoin effectively led the market expansion. Top cryptocurrencies are attracting investors who want to diversify their portfolios.

Investors who want to enter the field of encryption have many problems to be solved - whether to buy a large amount of one currency, divide funds between two different cryptocurrencies, or participate in the flow of multiple currencies. Specific cryptocurrencies are suitable for specific needs, such as investment, application development, day trading, etc. A deeper understanding of money will give you a better chance to make informed decisions. This paper introduces the top ten cryptocurrencies that will open a bull market rebound before the end of the year.

Bitcoin

Bitcoin (BTC), founded by Nakamoto in 2009, is the original cryptocurrency. Like most cryptocurrencies, BTC runs on the blockchain, which is the ledger recording transactions distributed across thousands of computer networks. Since the addition of distributed ledger must be verified by solving an encryption problem, which is called proof of work, bitcoin is secure and will not be affected by fraudsters.

Ethereum

Ethereum is different from bitcoin. Recently, cryptocurrency broke its record and stabilized its position in the market. Its network allows developers to create their own cryptocurrency using Ethereum. Although it was launched several years later than other cryptocurrencies, it has far surpassed it in the market due to its unique technology. It is one of the best cryptocurrencies and will start a bullish rebound before the end of the year.

Solana

Solana blockchain, which supports smart contracts, is attracting developers for a reason. At Solana, the transaction is very affordable and can be completed in a few seconds. This is in sharp contrast to Ethereum, the world's largest smart contract blockchain, which costs up to \$100 and takes a few minutes to complete. Due to the low development cost, developers can create disruptive products.

Polkadot

Polkadot is an open source, blockchain platform and cryptocurrency. It provides interconnection and interoperability between blockchains, enabling independent chains to exchange information safely and execute transactions with each other without a trusted third party.

Cardano

Thanks to its flexible network and fast transactions, Cardano continues to remain one of the most popular cryptocurrencies. Claim to be more environmentally friendly, followed by other currencies. Like a company's dividend on shares, it can prove stronger prices over time because it has gathered real-world uses, from farm supply chains to combating retail plagiarism. Scalability, sustainability and interoperability are some of its main selling points. Recent network upgrades have enabled the facility to establish smart contracts on its network.

Terra

Luna also made impressive gains in 2021, reaching 13790%. At the beginning of this year, it started at \$0.65 and rebounded to a new high of \$22 in early March. Then in the second half of the year, it hit a new high of \$81 in early December. By the end of December, it had crossed the \$100 barrier, hit an all-time high of \$103.33, and then fell back to \$87.49. It is one of the best cryptocurrencies to start a bullish rebound before the end of the year.

Dogecoin

Thanks to Elon Musk's "Dogemaster" title, Doge surfaced. After months of criticism, it is just a memory coin. No one expected that the coin would become legal and be regarded as a long-term investment by other cryptocurrency traders. Doge rose this year and is one of the most cost-effective cryptocurrencies in the market. Some cryptocurrency analysts are considering dogcoin as a viable investment option.

XRP

XRP was founded by the founder of ripple, a digital payment processing company. As a platform, the cryptocurrency allows the exchange between cryptocurrency and legal tender. Ripple is investing heavily in the NFT project using XRP ledger, which is a public blockchain. Experts believe that this investment shows that the cryptocurrency is positioning itself as another "Ethereum killer".

Shiba Inu

Experts and cryptocurrency analysts believe that memo currency may not be a viable option for long-term investment. But memecoins has shown their potential in 2021, so it may make sense to invest in top memecoins like Shiba Inu. In 2021, Shib achieved an explosive surge, with a market value of 481000%. Well, for a controversial coin like Shib, this can be said to be the beginning. It is one of the best cryptocurrencies and will start a bullish rebound before the end of the year.
