Whar is Solaxy Presale? Everything You Need To Know

Recently, Solaxy (SOLX) achieved a noteworthy milestone by surpassing the $46 million threshold in its presale, which is just six days away from closing. This accomplishment demonstrates the project's unquestionable investor faith and enthusiasm.

In order to guarantee that users never see blocked or unsuccessful transactions, even during times of high network usage, Solaxy, the first Layer-2 blockchain ever developed on top of Solana, seeks to offer a scaling solution.

In a market where Bitcoin is hovering at all-time highs and poised for a breakthrough, getting in early at a presale like Solaxy could yield substantial profits.

Solaxy is the First Step in Solana's Future Scaling

There have been instances of congestion on Solana, which has caused users to lose time and money due to unsuccessful transactions, despite the network's reputation for speed and cheap rates.

For Solana, Solaxy is developing the first-ever Layer-2 scaling solution to alleviate congestion in networks. This is accomplished by having the L2 blockchain process all of the transactions that occur on its chain, then return the bundled transactions to the Solana mainnet for settlement.

An enormous step forward for the project, the most recent development update verified that the Solaxy testnet is now operational, allowing users to begin real-time testing of Solaxy's infrastructure and functionalities.

Using the dedicated RPC URL, developers and consumers interested in experimenting can connect using Backpack Wallet. In addition, the project's bridge allows them to connect Solana Devnet to the Solaxy testnet, and the block explorer allows them to monitor transactions. Now that the testnet is live, you can deploy smart contracts using Solana's native toolset.

Igniter Protocol, a decentralized exchange and platform for launching tokens, is being developed by the team, as they recently stated. When an Igniter token's bonding curve is complete, it will become instantly liquid on the DEX. This action establishes Igniter Protocol as a possible rival to Pump.pleasure in the expanding token launch market.

All things considered, this framework opens the door to possibilities like meme coin marketplaces and high-throughput DeFi applications.

The Future of DeFi on Multiple Chains

The heart of the Solaxy network is the SOLX token. The goal of SOLX, a native asset on both Ethereum and Solana, is to combine the advantages of both platforms, namely the cheap transaction costs and high speed of Solana with the liquidity of Ethereum.

If you're interested in Solana or prefer Ethereum's protocols, SOLX can bring both markets together for you.

The fact that Solaxy's staking mechanism provides a dynamic APY of 87% is another big incentive for early adopters. Those planning to keep the token for the long haul will find this incentive appealing.

The time is running out for individuals who are thinking about an entry point. After the seven-day presale ends, SOLX will be available for trading on exchanges. After then, the market forces of supply and demand will decide the token's price.

Trending crypto analysis Cryptonews, a YouTube channel, predicts that Solaxy will soon burst as the next 100x meme coin.

Get Your SOLX in Time for the Presale

Time is running out to secure your spot early. Pre-sale funds for Solaxy have surpassed $46 million, demonstrating widespread enthusiasm in the cryptocurrency industry. Investors who wish to take advantage of the discounted pricing on SOLX must act quickly, since there are only six days left.

By visiting the official Solaxy presale website, users can purchase the token using SOL, ETH, BNB, USDT, or bank cards, and they can also participate in the presale. Soon after the presale concludes, token claiming will be available.
Already having a functional testnet, bridge, and block explorer, as well as a planned decentralized exchange (DEX) and a platform to launch tokens, Solaxy is well ahead of many projects that haven't even reached the whitepaper stage. With one of the biggest presales on the market, Solaxy is definitely one to keep an eye on.

How to Trade Crypto on BTCC?

This brief instruction will assist you in registering for and trading on the BTCC exchange.

Step 1: Register an account

The first step is to hit the "Sign Up" button on the BTCC website or app. Your email address and a strong password are all you need. After completing that, look for a verification email in your inbox. To activate your account, click the link in the email.

Step 2: Finish the KYC

The Know Your Customer (KYC) procedure is the next step after your account is operational. The main goal of this stage is to maintain compliance and security. You must upload identification, such as a passport or driver's license. You'll receive a confirmation email as soon as your documents are validated, so don't worry—it's a quick process.

BTCC FAQs

Is BTCC safe?

Based on its track record since 2011, BTCC has established itself as a secure cryptocurrency exchange. There have been no reports of fraudulent activity involving user accounts or the platform's infrastructure. By enforcing mandatory know-your-customer (KYC) and anti-money laundering (AML) procedures, the cryptocurrency trading platform gives consumers greater security. For operations like withdrawals, it also provides extra security features like two-factor authentication (2FA).

Is KYC Necessary for BTCC?

Indeed. Before using BTCC goods, users must finish the Know Your Customer (KYC) process. A facial recognition scan and legitimate identification documents must be submitted for this process. Usually, it is finished in a few minutes. This procedure has the benefit of strengthening the security of the exchange and satisfying legal requirements.

Because their accounts will have a lower daily withdrawal limit, those who do not finish their KYC are unable to make deposits. It should be noted that those who present a legitimate ID without a facial recognition scan will likewise have restricted withdrawal options.

Is There a Mobile App for BTCC?

Indeed. For users of iOS and Android, BTCC has a mobile app. The exchange's website offers the mobile app for download. Since both the web version and the mobile app have the same features and capabilities, they are comparable.

Will I Have to Pay BTCC Trading Fees?

Indeed. BTCC levies a fee for trade, just like a lot of other centralised exchanges. Each user's VIP level, which is unlocked according to their available money, determines the different costs. The BTCC website provides information on the charge rates.

Can I Access BTCC From the U.S?

You can, indeed. According to its website, BTCC has obtained a crypto license from the US Financial Crimes Enforcement Network (FinCEN), which enables the cryptocurrency exchange to provide its services to investors who are headquartered in the US.

According to BTCC's User Agreement document, its goods are not allowed to be used in nations and organisations that have been sanctioned by the United States or other nations where it has a licence.
