What is Viction?

Viction is a rebranded project originating from TomoChain (TOMO), a blockchain developed since 2018. Viction is a layer-1 blockchain that offers zero-gas transactions and a user focused interface that fosters a range of projects within the new community driven ecosystem.

Viction utilizes a unique Proof-of-Stake Voting (POSV) consensus mechanism to power its operations, providing high speed, security, and liquidity for users. Viction aims to encourage mass adoption by increasing the ease of developing applications and projects with cryptocurrency technology. The ecosystem comprises products designed to facilitate this goal, including the Dex Maker tool, wallets, and more.

Viction can process up to 2,000 transactions per second, with a block time of just 2 seconds and a very low fee. Currently, Viction works with several partners, including Layer-Zero, Pyth, MoonPay, CoinGecko and others.

How does Viction Work?

Viction leverages an innovative consensus mechanism known as Proof-of-Stake Voting (PoSV), which actively engages all VIC token holders in the staking process through a network of 150 Masternodes. As an EVM-compatible blockchain, Viction is designed for high scalability, enabling Ethereum smart contracts to execute with near-instant transaction confirmation.

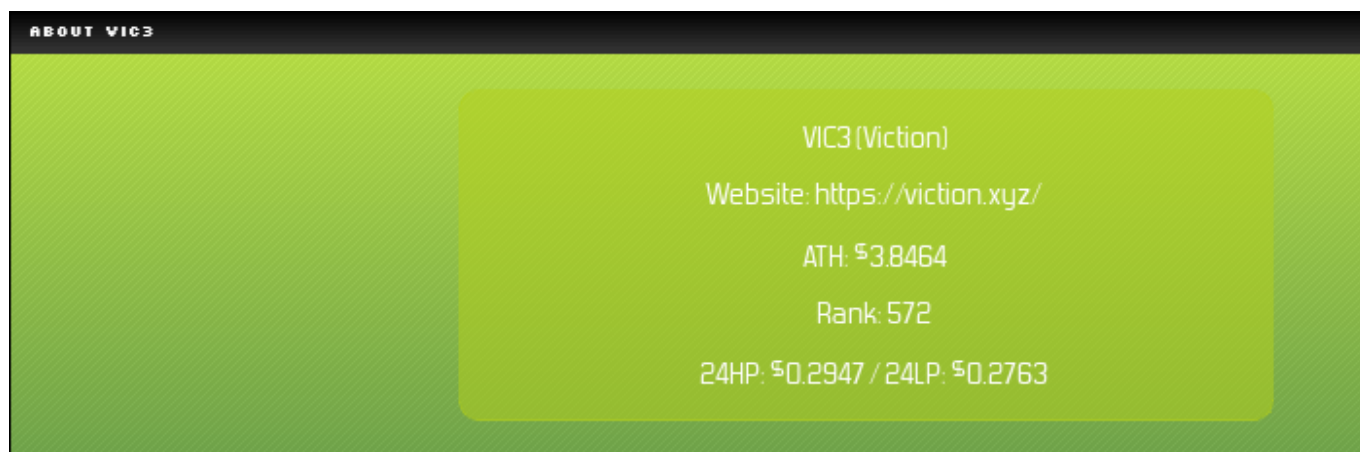

The Viction blockchain is secured and maintained by 150 Masternodes, which operate under the following framework:

- Token holders must deposit 50,000 VIC to qualify as a Masternode Candidate.
- The community votes to elect Masternode Candidates.
- The top-ranked Candidates, based on votes, become active Masternodes.
- Masternodes generate blocks in a round-robin format, utilizing double validation to prevent collusion.
- Masternodes that finalize blocks receive incentives for their contributions.

By combining security, efficiency, and decentralization, Viction's PoSV consensus model fosters an inclusive and rewarding staking ecosystem.
