### Why is XRP Price Dropping? XRP Hits Its Lowest Level Due to Trump's Tariffs

#### Key Takeaways:

- A trade war is sparked by Trump's tariffs, which cause XRP to plummet to \$1.67, its lowest level since November 2024.
- As [cryptocurrency](#) sell-offs and trade anxieties hit, XRP declines 25% in a month, liquidating \$47 million.
- Experts estimate that XRP will be between \$3 and \$27 by 2025, but if support falters, tariffs could drive it down to \$1.

The cryptocurrency associated with Ripple Labs, [XRP](#), has fallen to \$1.6775 as of April 7, 2025, the lowest since November 2024. Due to this steep drop, investors are frantically trying to figure out why the price of XRP is dropping and how much lower it can go. What is causing this abrupt decline in a market that earlier this year appeared to be headed for expansion?

The explanation is found in a combination of macroeconomic factors, with the global trade war and the broad tariffs imposed by US President Donald Trump taking front stage. Cryptocurrencies like Ethereum (ETH) and Bitcoin (BTC) are also suffering from the "trade war pain," with Ethereum falling to \$1,538 in a risk-off market sell-off and Bitcoin losing 7% to \$77,077. This is also true of XRP, which is frequently linked to more general cryptocurrency trends.

By examining the chart from a technical standpoint and verifying the most recent XRP price forecast for 2025 and beyond, this article delves deeply into the causes of the recent decrease.

## **The XRP Price in USD Today is at its Lowest Point since November 2025**

XRP's value has dropped by more than 25% in the last 30 days, causing it to fall to #4 on the cryptocurrency market cap list. Right now, on Monday, April 7, 2025, the price of one XRP is \$1.67, which is the lowest it has been since November 20, 2024, which is five months ago.

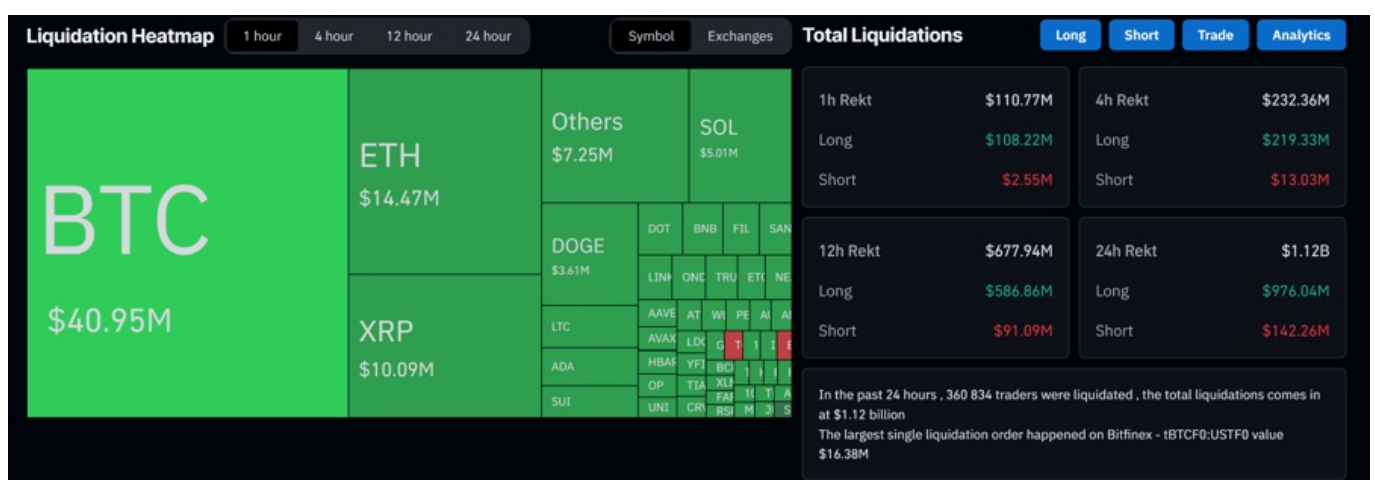

The market cap of the cryptocurrency has dropped 17% to \$102.5 billion, although the trading volume for the past 24 hours has been very strong at \$7.65 billion, an increase of 261%, because there has been a lot of selling.

The price of XRP dropped by 10.4 percent on Sunday and another 12.3 percent on Monday.

Source: CoinMarketCap.com

Evidence of the extent of the market panic is the \$968 million in bullish crypto wagers that were liquidated in the last 24 hours, according to data from Coinglass. This includes \$321 million for Bitcoin and \$269 million for Ether. Although the numbers for XRP's liquidation are lower, they are still rather high, coming in at \$47 million.

## **Why is XRP Price Dropping?**

### **The Onslaught of Trump's Tariffs**

President Trump imposed significant taxes on imports from key trading partners like China, Mexico, and Canada on April 2, 2025, in what he called the "Liberation Day" tariffs. Worries of a full-blown trade war have been heightened by the imposition of a 25% duty on imported steel and aluminium, a 20% tariff on all Chinese exports, and further tariffs on autos. The actions have reportedly "wiped trillions in value from U.S. equities," according to Bloomberg, who notes that investors are fleeing risky assets like U.S. equity-index futures and the yen. According to CNBC, the market value of global stocks fell by \$7.46 trillion in the two sessions after the tariff announcement, with the United States losing \$5.87 trillion.

Trump's new announced tariffs- basically add 20% to the cost of any product you buy. This is going to be horrible [pic.twitter.com/1oHX2hx9Pt](https://pic.twitter.com/1oHX2hx9Pt)

— Maya Luna (@envisionedluna) [April 2, 2025](#)

This macroeconomic volatility has been devastating for cryptocurrency prices. The market leader, Bitcoin, erased gains that had kept it above \$80,000 for most of 2025 when it dipped below \$78,000 on Sunday evening, April 6. On Monday morning, XRP followed the 12% decline in Ether and Solana tokens and dropped to \$1.6775.

# Why Crypto Is A Victim of Trade Wars

Theoretically, XRP and similar cryptocurrencies are considered risk assets, which means that their value increases in an environment of low interest rates and decreases when investors become risk adverse. As a result of reduced liquidity and the prospect of slower global development, investors may flee to safe havens like gold or the US dollar as a result of Trump's tariffs.

Suvashree Ghosh and Sidhartha Shukla of Bloomberg draw attention to a "clear risk-off sentiment across markets," as the options markets indicate that selling pressure will persist. In an interview with Bloomberg, FalconX's Sean McNulty said that \$75,000 is Bitcoin's critical support level, and that there is increasing demand for put options near \$70,000, suggesting that traders anticipate additional drops.

Crypto markets in trade wars:

Since trade war worries began on January 20th, crypto markets have erased -\$800 BILLION.

For 10+ years, Bitcoin was viewed as a decentralized HEDGE against uncertainty, but something changed.

Why is crypto falling? Let us explain.

(a thread) [pic.twitter.com/NQiRiD5Be5](https://twitter.com/NQiRiD5Be5)

— The Kobeissi Letter (@KobeissiLetter) [February 27, 2025](#)

Even if XRP is useful for international payments, it isn't safe. It follows the general crypto market because of its strong association with Bitcoin, which has frequently above 0.8 since the COVID-19 outbreak. In the midst of this trade war, Bitcoin has been tanking, and XRP is feeling the (pun intended) ripple effects.

# XRP Price Technical Analysis

According to my technical research, XRP price has hit the bottom border of a negative regression channel that has been established on the chart since the peaks of January 2025, following severe two-day drops on Sunday and Monday. Although this line has served as support and prevented any declines thus far, it should be noted that XRP/USDT is also breaking out of the intraday low zone formed by the troughs on February 3. Another “break” of the trendline is possible if Monday’s session ends below the \$1.77 mark.

If this happens, I think the XRP price might fall even more precipitously, maybe reaching 1.50 or even the psychological \$1 mark. Why do I think XRP will be dominated by bears? This is mostly because of the \$2.00–2.01 level, which has served as a crucial support zone continuously since early December and has been tested multiple times, notably in early April. On Sunday, nevertheless, its dynamic disintegration occurred, and on Monday, its rejection was amply verified.

In the sake of objectivity, I will also note the levels of resistance, even though there is no current evidence that XRP will rise. If we go beyond \$2.01, we can see on the chart that February’s lows are at \$2.92. Consistent with the highs from early December, the next level is approximately \$2.86. If the market favours bulls again, the goal for them would be to return to the highs of January, which would be \$3.37.

## XRP Price Prediction for 2025

Because of Ripple’s institutional acceptance and regulatory developments, actual people, experts, and banks are still confident about the long-term prospects of XRP, even though it is now down. After the deep insights, you’ll find a table that summarises the XRP price estimates for 2025 and beyond.

For 2025, analysts have a wide range of predictions, indicating both pessimism and optimism. In light of past price trends and Ripple's expanding importance in payments, Changelly projects a range of \$2.12 to \$4.52, with an average of \$3.32. A little more optimistic, DigitalCoinPrice is pointing to continued interest despite the trade war drop and is trading at \$3.51. According to TheCryptoBasic's research from April 3, 2025, Bitwise has provided institutional clients with a conservative estimate of \$3.50-\$4.00 for the XRP ETF following its submission.

With an eye towards the future, hope is rising. Assuming widespread use, DigitalCoinPrice estimates XRP will reach \$80.57 by 2030, while Changelly predicts an average price of \$26.09 by the same year. A \$30 maximum for Bitwise in 2030 is in line with institutional adoption, which is supported by Ripple's relationships with banks like Bank of America and SBI Holdings. CoinPriceForecast has set a \$50 target, which is a reasonable and robust increase. XRP's potential to become a foundational asset in global finance is a key factor in determining Telegaon's \$48 maximum for 2030 and \$235 average by 2040. The timeframe was not disclosed, but former Citi analyst Shannon Thorp offered a speculative range of \$100 to \$500.

## What XRP Investors Can Expect Next

A difficult period for XRP occurred on April 7, 2025, when its price dropped to \$1.6775 due to the impact of Trump's tariffs and the subsequent trade war. The risk-off attitude that has been hammering cryptocurrency markets has shown XRP's weaknesses, such as its dependence on international trade and its susceptibility to fluctuations in Bitcoin.

The way ahead calls for investors to be on high alert. Keep an eye on technical levels, such as the \$1.70 support level, as well as any changes to tariffs and Ripple's regulatory status. Now is the moment to reevaluate your strategy, whether you're a novice crypto enthusiast or an experienced trader. Think about diversifying your holdings or staying the course for a possible recovery.

# FAQs

## What's Causing XRP to Drop?

The main causes of XRP's decline are macroeconomic factors brought on by US President Donald Trump's broad tariffs, which have sparked a global trade war and a risk-off attitude in financial markets. At \$1.7504 as of April 7, 2025, XRP has lost more than 25% in the last month, dropping 10.4% on Sunday and another 12.3% on Monday.

## Will XRP Rise Again?

Indeed. The resolution of trade war tensions and catalysts unique to cryptocurrencies are necessary for XRP's possible rebound. Changelly forecasts an average of \$3.32 by the end of 2025, indicating that analysts are still cautiously hopeful. Prices may potentially rise because to Ripple's RLUSD stablecoin and possible regulatory tailwinds in the US.

## Is XRP a Good Investment Right Now?

Indeed. Nevertheless, there are risks and rewards associated with purchasing XRP at \$1.7504. Risk-tolerant investors hoping for a recovery will find the current price interesting because it represents a significant discount from its peak of \$3.37 in January 2025. Caution is recommended due to the negative technical view (potential drop to 1.50 if 1.77 fails) and the large selling volumes (\$7.65 billion in 24 hours, up 261%).

## Why Did XRP Just Go Down?

The latest collapse of XRP, which fell 10.4% on Sunday and 12.3% on Monday to hit \$1.7504, is a result of the larger crypto market meltdown brought on by Trump's tariffs. According to CNBC, investors shunned riskier assets like XRP as global markets fell \$7.46 trillion in two sessions. Monday confirmed the rejection of the dynamic sell-off that was prompted by the violation of the 2.00-2.01 support, which had been tested since December. According to Coinglass statistics, panic selling resulted in \$47 million in XRP bullish liquidations.

## Why Choose BTCC?

Founded in 2011, BTCC is among the world's oldest and most reliable bitcoin exchanges. Many traders use BTCC because it has established a solid reputation in the market for security and regulatory compliance over the years. The platform is especially well-suited for traders in North America and Europe, with presences in the US, Canada, and Europe.

In addition to bitcoin trading, BTCC provides traders with access to non-crypto assets including gold, silver, and U.S. equities through cutting-edge features like copy trading, perpetual futures, and tokenized stocks. Both novice and seasoned traders searching for a secure and regulated platform can benefit from BTCC's range of offerings.

The firm's products are designed to meet the needs and desires of both rookie and experienced traders. Here are five reasons for using the exchange:

- Numerous transferable assets
- Excessive trading leverage
- Strong copy trading capabilities
- Perfect security record
- Interface that is easy to use
- Accessible to traders in the US and Canada

### [BTCC **Bonuses and Special Offers**]

(1) **[New User Welcome Reward](#)**: As a new user, you can claim a welcome reward of up to **10,055 USDT**.

(2) **[Referral Program](#)**: You can earn up to **35% commission on your referrals, plus up to 10,060 USDT in rebates per referral**.

By creating an account, I agree to BTCC's [Privacy Policy](#) and [User Agreement](#)

## Step 2: Finish the KYC

The Know Your Customer (KYC) procedure is the next step after your account is operational. The main goal of this stage is to maintain compliance and security. You must upload identification, such as a passport or driver's license. You'll receive a confirmation email as soon as your documents are validated, so don't worry—it's a quick process.

## Step 3. Deposit Funds

After that, adding money to your account is simple. BTCC provides a range of payment options, such as credit cards and bank transfers. To get your money into your trading account, simply choose what works best for you, enter the amount, and then follow the instructions.

- **Fiat Deposit.** Buy USDT using Visa/Mastercard (KYC required).
- **Crypto Deposit.** Transfer crypto from another platform or wallet.

## Fund Your Account

I don't have crypto assets

### Fiat Deposit

Fund your account with USDT using  
Visa/Mastercard

### P2P

Buy and sell cryptos with flexible payment  
methods and 0 transaction fees.

## BTCC FAQs

### Is BTCC safe?

Based on its track record since 2011, BTCC has established itself as a secure cryptocurrency

exchange. There have been no reports of fraudulent activity involving user accounts or the platform's infrastructure. By enforcing mandatory know-your-customer (KYC) and anti-money laundering (AML) procedures, the cryptocurrency trading platform gives consumers greater security. For operations like withdrawals, it also provides extra security features like two-factor authentication (2FA).

### **Is KYC Necessary for BTCC?**

Indeed. Before using BTCC goods, users must finish the Know Your Customer (KYC) process. A facial recognition scan and legitimate identification documents must be submitted for this process. Usually, it is finished in a few minutes. This procedure has the benefit of strengthening the security of the exchange and satisfying legal requirements.

Because their accounts will have a lower daily withdrawal limit, those who do not finish their KYC are unable to make deposits. It should be noted that those who present a legitimate ID without a facial recognition scan will likewise have restricted withdrawal options.

### **Is There a Mobile App for BTCC?**

Indeed. For users of iOS and Android, BTCC has a mobile app. The exchange's website offers the mobile app for download. Since both the web version and the mobile app have the same features and capabilities, they are comparable.

### **Will I Have to Pay BTCC Trading Fees?**

Indeed. BTCC levies a fee for trade, just like a lot of other centralised exchanges. Each user's VIP level, which is unlocked according to their available money, determines the different costs. The BTCC website provides information on the charge rates.

### **Can I Access BTCC From the U.S?**

You can, indeed. According to its website, BTCC has obtained a crypto license from the US Financial Crimes Enforcement Network (FinCEN), which enables the cryptocurrency exchange to provide its services to investors who are headquartered in the US.

According to BTCC's User Agreement document, its goods are not allowed to be used in nations and organisations that have been sanctioned by the United States or other nations where it has a licence.
